

Accelatis Ascension Suite

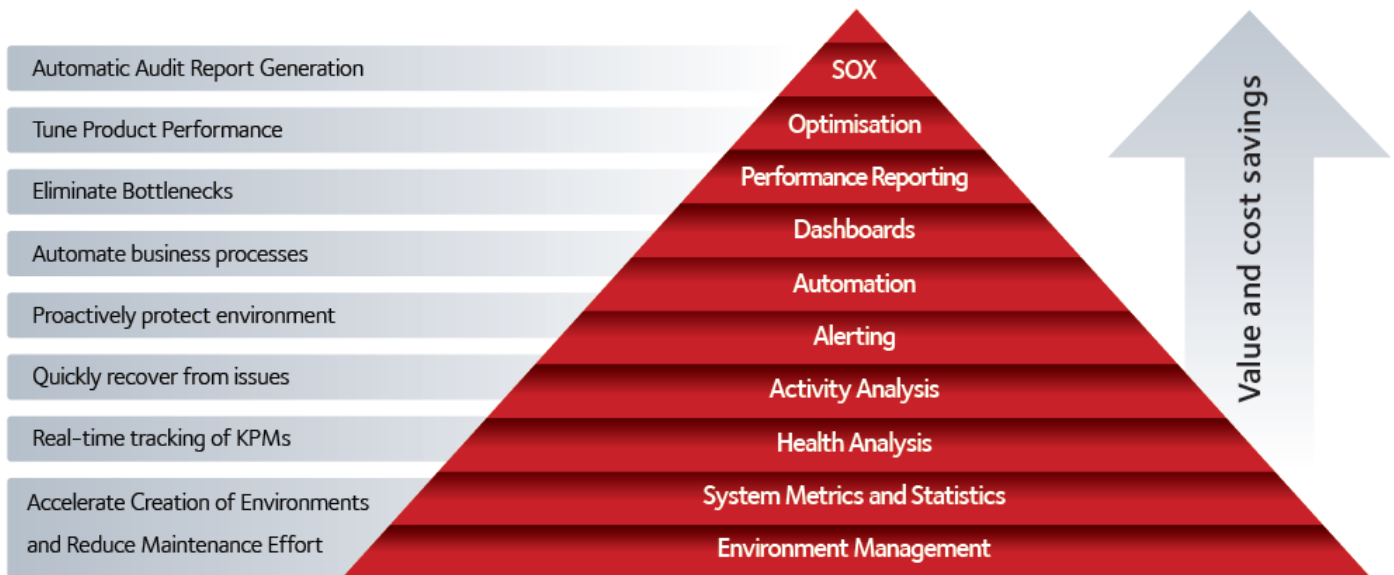

What is the Accelatis Ascension Suite?

Accelatis Ascension Suite is a Performance Monitoring and Infrastructure Management toolset built specifically to address the unique challenges of your Oracle Hyperion EPM environment.

Ascension Suite works across the Oracle Hyperion EPM applications: Hyperion Financial Management (HFM), Planning, Essbase and associated products such as SmartView, Shared Services, Reports and Financial Data Quality Management.

Ascension Suite helps monitor, manage and report at all levels of the Oracle Hyperion EPM environment, from IT/ Infrastructure and Application Administration to solving problems that face the CFO. Ascension Suite will improve performance while decreasing the total cost of ownership of your Oracle Hyperion EPM deployment.

Ascension Suite Value Pyramid

What our customers say

"The ability to get to the root cause of challenges quickly will help our teams avoid hours of unnecessary detective work."
Senior IT Director, Invensys

"Accelatis improved our consolidation performance by 40%. It pointed out areas where we would never have thought to look."
HFM Administrator, Emerson

"For the rest of IT, we standardised on Tivoli. For Hyperion, we standardised on Accelatis."
Fortune 100 Technology Company

Contact Us

To arrange a demonstration or to discuss how Accelatis Ascension Suite can benefit your Hyperion EPM implementation, call AMOSCA on +44 20 8659 5777 or email us at contactus@amosca.co.uk

Accelatis

Ascension Suite

Functional Overview

Manage

Environment Manager

- Get quick insight into every server in the deployment and leverage tools and guidance to change product settings.
- Report on servers with sub-optimal tuning settings and environments with out-of-sync servers.

Enterprise Automation

- Automate tasks from any product including those outside of Hyperion.
- Chain tasks together to form flows that can run across servers in sequence.

Monitor

Server Monitoring

- Track all system components that affect stability and performance of a Hyperion deployment.
- Monitor KPIs, Component Health, User Response Times, Logs, Network Performance, SLAs, Data and Configurations.

Real-Time Alerting

- Catch problems before they happen to achieve High Availability and improved Quality of Service.
- Improve fault tolerance with automatic problem remediation.

Change Audit Reporting

- Automatically detect, record and report on any SOX-related activity.
- Generate reports from any point-in-time to any other point-in-time.
- Optionally allows client to add commentary to each change and associate internal Change Reference numbers to be included in the report.

Resolve

- Comprehensive log retrieval at the click of a button.
- Presentation of Log Events, User Activity, Metrics, User Response Times and more presented on a single time scale graph.
- Drill down to network level activity, like TraceRT history, from remote nodes.

Simulate

Load Testing/User Simulations

- Performance testing software specifically designed for Oracle EPM, simplifying the testing and reducing testing costs.
- Identify performance issues before adding users/entities.
- Leverage historical data and user interface from other Accelatis Ascension Suite modules.

Optimise

- Identify bottlenecks that are robbing your deployment of performance.
- Access automated Essbase Calc Profiling, HFM Rules Profiling, Sub Cube Analysis and Zero Data Analysis at the click of a button.

Anticipate

- Have confidence knowing what users will experience during heavy usage.
- Built-in graphs and reports to assist with capacity planning.
- Catch problems before they happen to achieve High Availability and improved Quality of Service.
